

Travel Company model ERD

assumption: Call duration is stored in minutes to facilitate monthly reporting
Each call is handled by exactly one consultant

DVD Rental Model ERD

assumption:
A 1:1 relationship between branch and staff identifies the current manager.
Each dvd_copy is permanently owned by a specific branch
Customers can maintain active memberships at multiple branches simultaneously
The 10-item rental limit is enforced by business logic
dailyRentalCost is stored in the rental record to preserve historical transaction data
Member full name and movie title are derived via joins (member, dvd_copy, movie) and are not duplicated in rental to avoid redundancy; dailyRentalCost is stored for historical accuracy
